LARGE CHEMICAL PLANT TO BE BUILT

Soon a Bulgarian-Soviet company will begin building a 30-meter-high plant [location not specified], which will produce soda products for the heavy chemical industry. A housing project for 10,000 workers will be located near the plant. The ten shops of the plant will be built on 300-decare area. The plant will have its own power plant and a 7-kilometer industrial railroad. With the help of Soviet experts, the plans for the plant have been completed, and some of the machinery for the plant has already arrived from the USSR. The plant is expected to be completed by the end of 1953.

The "Stalin" Nitrogen Fertilizer Plant will produce 70,000 tons of fertilizer per year. Through fertilization, 30 percent more wheat will be produced per decade than prior to fertilization.
